

Specialized Technical Session on Sustainable Transport

25 November 2019, Victoria Falls

Sustainable Urban Transport Index (SUTI) for Asian Cities

Madan B. Regmi, DEng
Transport Division
UNESCAP, Bangkok

Traffic Congestion in Asian Cities

RANK BY FILTER	WORLD RANK	CITY	COUNTRY	CONGESTION LEVEL
1	1	Mumbai	 India	65% ↓ 1% >
2	4	New Delhi	 India	58% ↓ 4% >
3	7	Jakarta	 Indonesia	53% ↓ 8% >
4	8	Bangkok	 Thailand	53% ↓ 2% >
5	18	Chongqing	 China	44% - >
6	19	Tel Aviv	 Israel	42% ↓ 2% >
7	20	Zhuhai	 China	42% - >
8	23	Guangzhou	 China	42% - >
9	25	Tokyo	 Japan	41% - >
10	30	Beijing	 China	40% - >

% change in travel time

Rail based MRT in Asian Cities

Public transport mode share in Asian cities

Urban Mobility in Asian cities

- ❑ Cities with good example of public transport : Tokyo, Singapore, Seoul, Hong Kong, China
- ❑ Mass transit system: Bangkok, Beijing, Delhi, Jakarta, Kuala Lumpur, Moscow, Tehran, Lucknow, etc.
- ❑ Bus Rapid Transit: Many cities in China (20) and India (8)
 - 44 Asian cities, 1624 route Km, 9.47 mil passengers/day
 - Tehran highest capacity-2 m, Jakarta longest route-207 km
- ❑ Cities of least developed and land locked countries
 - Mass transit: Almaty, Baku, Tashkent and Yerevan
 - Public mass transport in still developing stage
- ❑ Non-Motorized Transport: A significant population depends on walking & bicycling
- ❑ Bus service, para-transit, private vehicles

Capital costs of development of different mass transit systems

City	Type of system	Length, Km	Cost per km (mil \$/km)
Janamarg, Ahmedabad	BRT	82	2.4
Kuala Lumpur (PUTRA)	Elevated rail	29	50.0
Kuala Lumpur Monorail	Monorail	8.6	38.1
Bangkok (BTS)	Elevated rail	23.7	72.5
Beijing Metro	Metro rail	113	62.0
Shanghai Metro	Metro rail	87.2	62.0
Bangkok MRTA	Metro rail	20	142.9
Hong Kong Subway	Metro rail	82	220

Transport Mitigation Strategies of Asia-Pacific Countries

Sustainable Urban Transport Index (SUTI)

- ❑ To **measure sustainability** of urban transport and progress towards SDG target 11.2
- ❑ To help **summarize, compare and track** the performance of urban transport in cities
- ❑ To **facilitate** discussion to develop plans and policies to improve urban transport
- ❑ **Simple Approach:**
 - ❑ Not too many indicators
 - ❑ Not complex calculations,
 - ❑ Simple, based on existing methodology, policies
- ❑ **Framework:** Sustainable Development, Sustainable Mobility, relevant SDG targets

Identification of potential indicators

- ❑ Extensive literature review of indicators
- ❑ **420** individual urban transport indicators identified
- ❑ Reduced to a **shortlist** of 20 most relevant indicators
- ❑ **Subjectively scored** using two sets of criteria
 - **Relevance** for Sustainable Transport framework
 - **Methodological** quality
 - **Consultative process with cities, countries and experts**
 - Reviewed & agreed at two UNESCAP meetings:
 - Expert Group Meeting, Kathmandu, September 2016
 - Regional Meeting, Jakarta, March 2017
- ❑ Resulting list of **10 indicators** in **four domains** :
 - Transport system, Social, Economic & Environmental domain

10 SUTI Indicators

No	Indicators	Measurement units	Weights	Range	
				MIN	MAX
1	Extent to which transport plans cover public transport, intermodal facilities and infrastructure for active modes	0 - 16 scale	0.1	0	16
2	Modal share of active and public transport in commuting	Trips/mode share	0.1	10	90
3	Convenient access to public transport service	% of population	0.1	20	100
4	Public transport quality and reliability	% satisfied	0.1	30	95
5	Traffic fatalities per 100,000 inhabitants	No of fatalities	0.1	10	0
6	Affordability – travel costs as part of income	% of income	0.1	35	3.5
7	Operational costs of the public transport system	Cost recovery ratio	0.1	22	100
8	Investment in public transportation systems	% of total investment	0.1	0	50
9	Air quality (pm10)	µg/m3	0.1	150	10
10	Greenhouse gas emissions from transport	CO2 Eq. Tons	0.1	2.75	0 ₁₀
SUM			1.00		

Normalization & SUTI Calculation

Linear Normalization of indicators 1-100 scale

$$Z_{i,c} = \frac{(X_{i,c}) - (X_{min,i})}{(X_{max,i}) - (X_{min,i})} * 100$$

$$SUTI = \sqrt[10]{i1 * i2 * i3 ... i10}$$

Where $i1...i10$ are the indicators

Geometric mean method chosen (similar to HDI)

'Equal weight' to each SUTI indicator is applied

							B1 DATA ENTRY		
							ENTER CITY DATA BELOW . Replace '0' with actual value. Add year if different from year in A. GENERAL INFO sub-sheet		
#	Indicators	Natural units	Weights	Range		VALUE	YEAR	COMMENTS ABOUT DATA SOURCES OR ISSUES RELEVANT FOR INTERPRETATION	
				MIN	MAX				
1	Extent to which transport plans cover public transport, intermodal facilities and infrastructure for active modes	0 - 16 scale	0.1	0	16	7	2017	Score is based on 'Prime Minister's Decision No. 568/QĐ-TTg: Approval for transportation development planning of Ho Chi Minh city by 2020, with a vision after 2020.	
2	Modal share of active and public transport in commuting	% of trips	0.1	10	90	28.52	2017	Data is based on an update of travel survey, Ho Chi Minh DOT reports, 2017	
3	Convenient access to public transport service	% of population	0.1	20	100	75.77	2017	Based on Hanoi DOT reports, 2017	
4	Public transport quality and reliability	% satisfied	0.1	30	95	41.77	2017	Based on research "Survey of people satisfaction indicator on public services in 2017"	
5	Traffic fatalities per 100.000 inhabitants	# fatalities	0.1	35	0	8	2017	Based on official police reports, 2017	
6	Affordability – travel costs as share of income	% of income	0.1	35	3.5	5.71	2017	Based on bus ticket fare level and average income of citizen	
7	Operational costs of the public transport system	Cost recovery ratio	0.1	22	175	22.1	2017	The data are for the 13 companies offering public bus service in the city	
8	Investment in public transportation systems	% of total investment	0.1	0	50	13.3	2017	Based on average transport investments by the city for the five years 2013-2017	
9	Air quality (pm10)	µg/m3	0.1	75	10	29.96	2017	Data for four monitoring stations managed by Vietnam Environment Administration. The values are averaged by estimate of population exposed per city area (station 1 = 23,88%; station 2 = 76,12%;	
10	Greenhouse gas emissions from transport	Tons/cap	0.1	2.75	0	0.38	2017	Based on estimate of traffic volumes (car, bus,motorbikes) on city road network for 2016, and average national emission factors per traffic mode	
MUST SUM TO 1			1.0

Application of SUTI in 2018

Ho Chi Minh

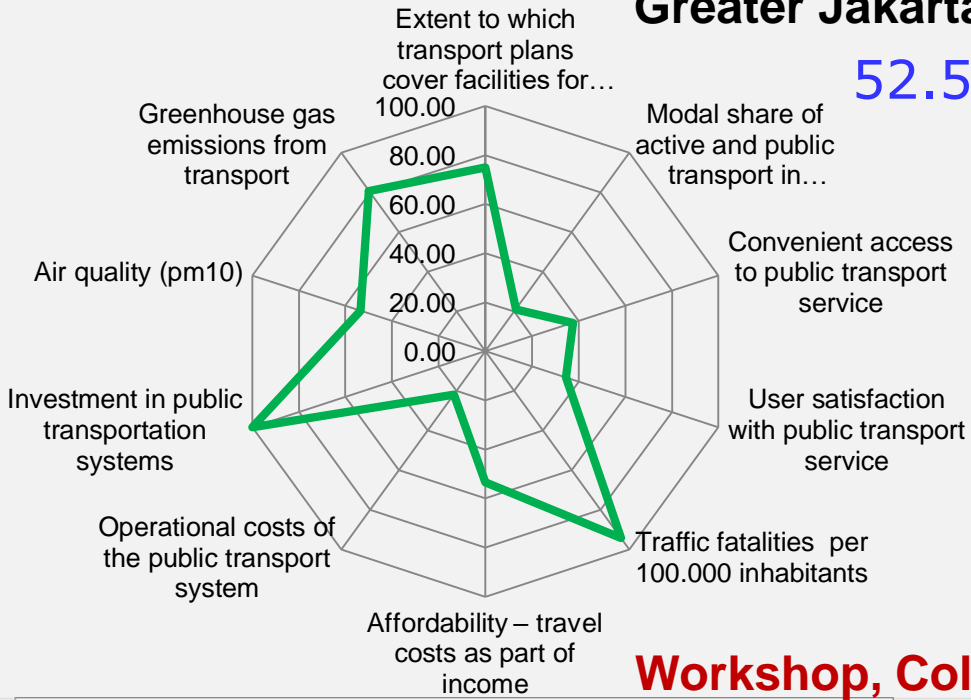

Surabaya

SUTI Pilot Application, 2017

Greater Jakarta

52.5

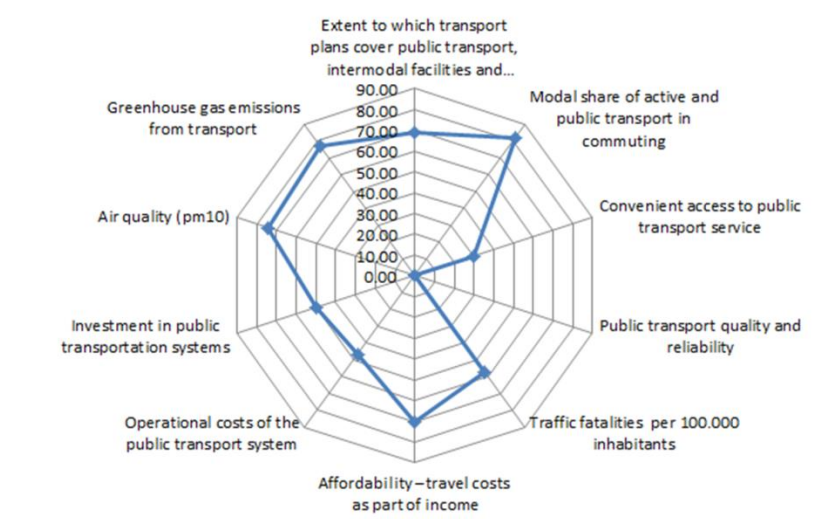

Hanoi

32.2

Workshop, Colombo, Oct 2018

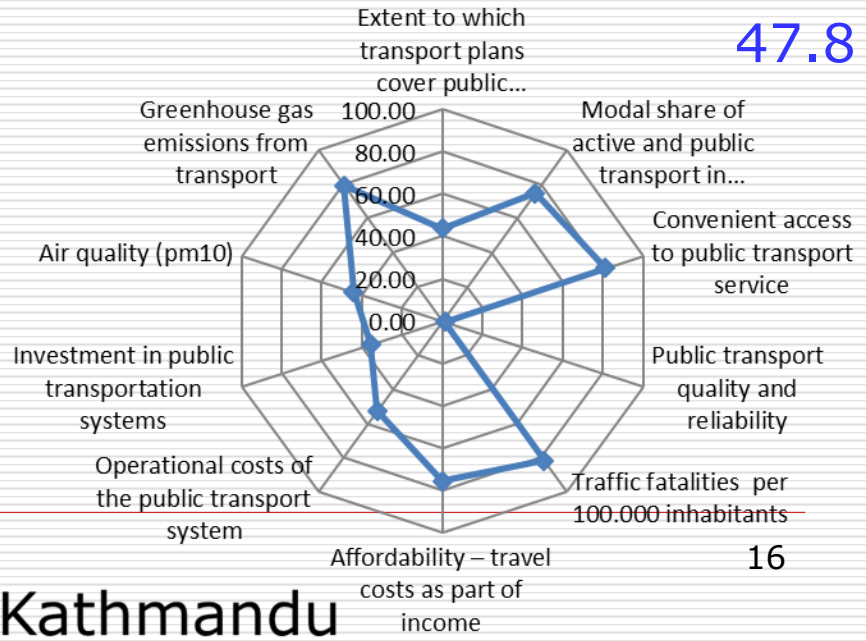

Colombo

32.7

Kathmandu

47.8

Kathmandu

Key findings

- ❑ Much focus on planning but weak implementation
- ❑ Low mode share of Public Transport
- ❑ Various degree of accessibility
- ❑ Public perception low- quality and reliability of service
- ❑ Safety – looks good- concentration of population
- ❑ Low investment in Public Transport
- ❑ Mostly affordable - but operational costs- mostly subsidized
- ❑ Poor air quality
- ❑ GHG from transport still not concern

Innovative Examples

Suroboyo Public Bus

Purabaya Bus Terminal

Public Transport-BRT

Electric Mobility

Concluding Remarks

- ❑ Focus on implementation of mobility strategies & plans
- ❑ Strengthen capacity of different layers of government
- ❑ SUTI endorsed as a tool to measure sustainability of urban mobility by the Committee on Transport, 2018
- ❑ Track progress over time (2 yr) & compare with peer cities
- ❑ Reporting through Voluntary National Review (VNR) at HLPF
- ❑ Data collection, availability and standardization
- ❑ Expand application in African cities, countries
- ❑ UNESCAP ready to collaborate- with African cities/countries & partners-SSATP, ReCAP, UNHABITAT, UNECA

Thank you
